

Why Aren't Women Being Told?

Abortion is the Most Preventable Cause of Breast Cancer

- Extensive studies since 1957 document a connection between abortion and breast cancer.
- Eight medical organizations recognize the link between abortion and breast cancer.
- Patrick Carroll (Pension and Population Research Institute) in his study of eight European countries found that abortion is the "best predictor" of future breast cancer rates.*

Why Aren't Women Being Told?

Additional Risks for Breast Cancer

- Combined oral contraceptives* have been identified by the World Health Organization as Group 1 Cancer Causing Agents.
- A Mayo Clinic meta-analysis found the use of oral contraceptives before a first full term pregnancy increases the risk of pre-menopausal breast cancer by 44%.

** "Most combined contraceptives are taken orally, but they can also be delivered by injection, transdermal patch, or vaginal ring." -Lancet Oncology 2005;6:552-553.*
